

## Detailed Description of the type of fills that are acceptable.

The cost will be lower if bins/skips are filled with just one type of waste.

### Bricks

Whole or broken they can be crushed and used in landscaping and drainage, or whole reused in construction and paving.

### Soil

Mainly used in environmental reconstitution of sites, base construction of major road projects or screened and reused for landscaping.

### Green/garden waste

All organic waste, branches and stumps up to 300mm in diameter can be mulched, composted and reused in all types of landscaping products.

### Concrete

Concrete/with or without reinforcing; this product is crushed and reused in all types of construction, the steel reinforcing is also reused.

### Roof tiles

Whole or broken they can be crushed and used in landscaping and drainage, or whole reused in construction.

### Timber

Clean timber/fencing; large timber can be reused in construction and landscaping, smaller items can be mulched or composted and reused for landscaping. (These items must be free of paint, glued laminates and particle board)

### Paper/cardboard

By volume this is the most recycled disposable item used by Australians, depending on the quality of the product collected it will be reused as office products, packaging, insulation or even furniture. We can also supply a secure disposal service for out of date documents and file.

### House hold items

Furniture, house hold items etc., unwanted items that you may have thought the Salvos collect. These items are sorted and resold assisting and supporting charities and sheltered workshops.

### Plaster

Plaster clean of glue and screws or nails can be reconstituted in to new product.

### Steel

All steel products can be easily recycled, reconstituted into many items from automobiles to white goods. The energy and environmental impact used to recycle is way less than mining new product.
